

Note on binding of an association particle to semantic particles

D. Gueorguiev 11/25/21

Primitive semantic particles

Let us consider two primitive semantic particles - V_i and V_j connected through association particle (link)

$A_{i,j}$.

$V_i \text{---} A_{i,j} \text{---} V_j$

The particles V_i and V_j are represented by their semantic signatures \mathbf{V}_i and \mathbf{V}_j . The association link $A_{i,j}$ is represented with its association matrix $\mathbf{A}_{i,j}$ and semantic significance vector $\mathbf{W}_{i,j}$.

The association matrix has the following structure:
